

Science Week in Reception

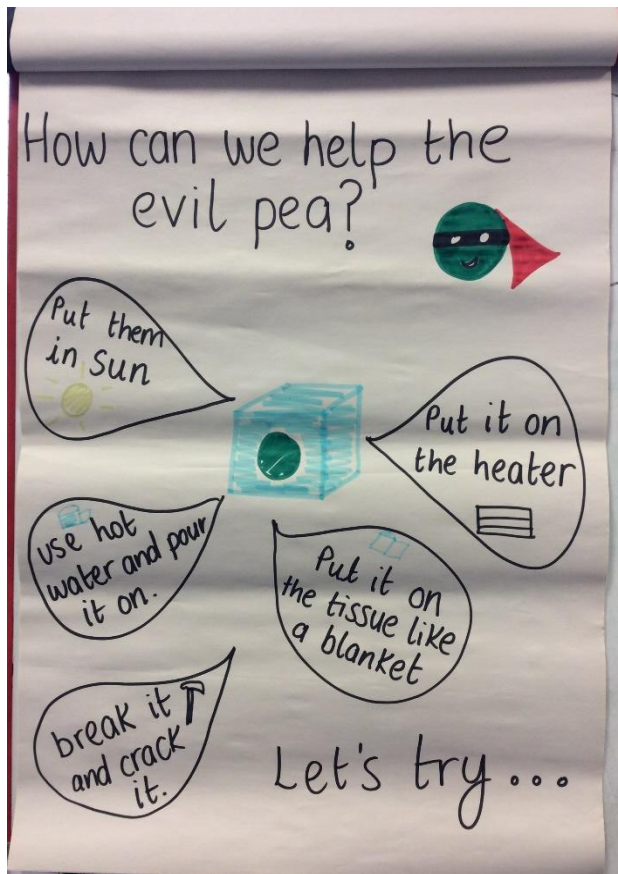

Supertato Science

We have been sharing the story Supertato and the villain Evil Pea has been causing all sorts of trouble in Reception.

He switched off the freezer in the school kitchen and we know what happens when frozen veg doesn't stay frozen...it goes bad!

We talked about what we could do if we wanted to help the evil pea and free all the peas as quickly as possible...what would melt the ice the fastest?

Here are our ideas...

Then we got to work...

We bashed and cracked it.

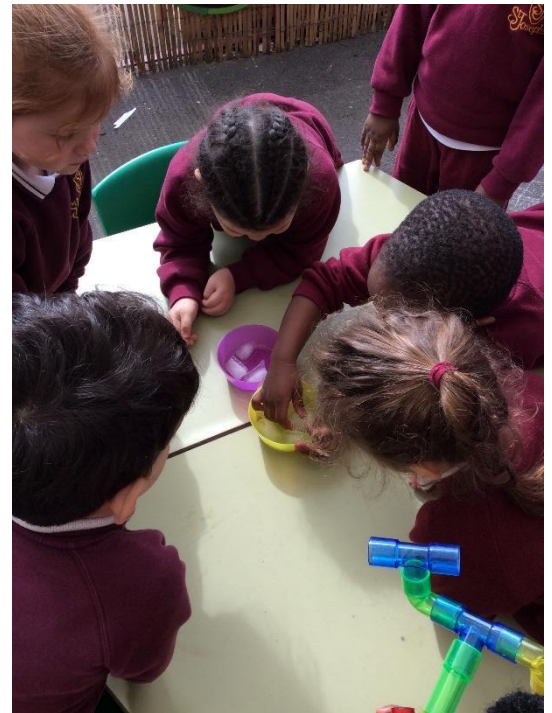

**We put it on the heater
and out in the sunshine.**

And even wrapped it in a blanket.

**We observed the ice melting and decided that the
hot water melted the ice the fastest.**

**Not only did the evil pea turn off the freezer he
trapped the carrot in
the supermarket till
and it chopped off
their tops!**

Now it was time for us to do something good and help save the carrots!

We are going to see if we can use the tops to make new carrots. We have put them in water and over the next few weeks we will watch and wait for new roots to grow.
